Day 09: Recap & Wrap-up

MMB-127

Course workflow

Your strain?

- Amount of raw data – estimated coverage?
- Did it assemble? In how many pieces the genomes is?
  - Any plamids? Or multiple chromosomes?
- How complete was the assembled genome?
  - Clear signs of contamination?
- Taxonomic annotation? Did it match with the 16S rRNA results?
- Metabolic pathways and secondary metabolites?
- Was it novel species?
- How does it compare to other closely related species?

Final report

- Genome announcement format
  - Software version & citation
  - Other than default options
- Example articles in Moodle
- DL 27.11. (?)

Nanopore methods

- Sequencing was done with a MinION Mk1D and a minion flowcell (FLO-MIN114).
- Library kit was Rapid Barcoding Kit 24 V14 SQK-RBK114.24

- Basecalling was done with Dorado v.2.1.1 (https://github.com/nanoporetech/dorado) with sup v.5.2.0 model (dna_r10.4.1_e8.2_400bps_sup@v5.2.0)
- Demultiplexing was done with Barbell v.0.3.2 (https://github.com/rickbeeloo/barbell)

Self-assessment

- Do the self-assessment in Moodle
- **Feedback in Norppa after the course**
